

KNOW YOUR blood pressure

How do I take my blood pressure at home?

- Avoid alcohol, caffeine and cigarettes for 30 minutes before measurement
- Sit quietly with dominant arm at heart level and back resting against a chair
- In the morning and evening, you should check your blood pressure twice, one minute apart
- If you are over age of 65 or diabetic, also check standing blood pressure. *Here's how:* Take BP once while sitting, stand and wait one minute before taking standing BP. Call your doctor if systolic drops more than 20 or diastolic drops more than 10

Hypertension is the #2 cause of Chronic Kidney Disease and End Stage Renal Disease.

54% of Stroke and 47% of Ischemic Heart Disease are caused by Hypertension.

Office blood pressures alone are not enough to diagnose or treat hypertension. Home BP Monitoring and 24 hour ABPM are the best tools to identify and treat hypertension.
